ITM MAHIDOL UNIVERSITY

Module 7

Value streams: mapping and management

Manutsiri Chansutthirangkool
CISSP, AAISM, CISM, CRISC, CEH, CHFI, ISO 27001 LI, ITILv4(f)

Syllabus

5.1 Key concepts of value stream mapping and management (all Assessment Criteria included)
5.2 Application of value streams (all Assessment Criteria included)
5.3 Purpose of value stream mapping and management (all Assessment Criteria included)

What you will learn

By the end of this module, you will be able to:

- know the purpose and key concepts of value stream mapping and management
- understand the relationship between value stream mapping and value stream management.

Introduction to value streams

Value stream
A series of steps that an organization uses to create and deliver products and services to a service consumer.

- **Organizations** differ in roles and workflows.
- **Workflows** are unique and context-driven.
- **Value streams** are real work that creates value.
- **Lifecycle management activities** adapt to context.

Why value streams

Value streams represent the actual sequence of activities that deliver value such as:

- real workflows, not blueprints
- flow of information and artifacts
- enable customer and stakeholder value
- cover end-to-end delivery
- activities combine differently in practice.

Value stream mapping allows organizations to ensure a shared understanding of the value they aim to create, achieve clarity in how that value is produced, and optimize the flow of work and information to improve output quality.

Types of value streams: core and enabling

Value streams can be grouped into **two categories:**

Core value stream
A value stream that enables value for consumers in a form intended by the organization's operating model.

Enabling value stream
A value stream that enables value for internal customers to support the organization's core value streams.

Note: These categories can be cascaded depending on the scope of 'organization' in every case. For example, delivering a digital service for preparing and executing a payroll may be a core value stream for the company's technology department, while even the payroll itself is seen as a supporting value stream enabling the company to perform its core business activities for its customers.

Value stream mapping

Value stream mapping is a technique to visualize and analyse value streams, focusing on the flow of work, information, and value created for the service consumer.

Use of value stream mapping helps to:

- ensure shared understanding of the value
- clarify how value is created
- optimize the flow of work and improve quality.

Steps of value stream mapping

Value stream mapping includes the following steps:

1. Identify the value stream
2. Map the 'as-is' stream
3. Analyse the stream
4. Map the 'to-be' stream
5. Plan and implement improvements

Value stream mapping vs. management

After learning why value streams matter, the next step is to see how mapping and management provide the techniques to analyse and continually improve them.

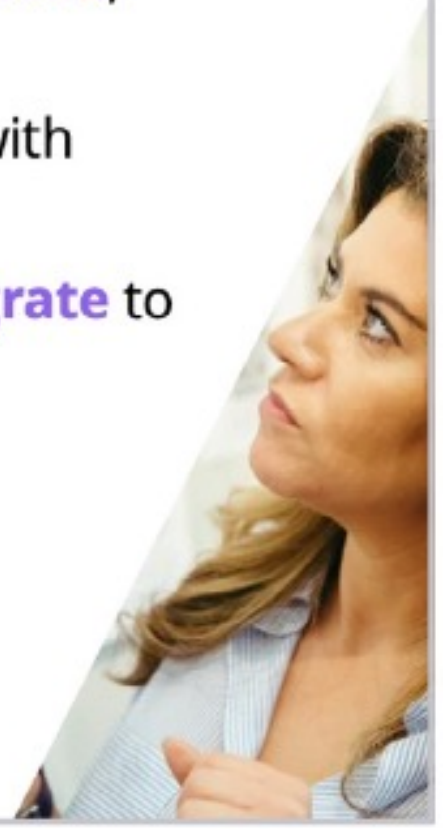

Value stream mapping	Value stream management
• Technique for visualizing and analysing streams • Shows flow of information, work, and value • Steps: Identify - mapping as-is - analyse - mapping to-be - improve.	• Ongoing focus on how work is done • Analysis and improvement of the organization's value streams. Both "management of" and "management through" streams • Supported by automation & measurement • Improves practices that enable streams.

Recap: Key learning points

- The **purpose** of **value streams** is to show the **real flow of activities** that **create** and **enable value** in digital organizations.
- **Value stream mapping** makes **workflows visible**, clarifies **how value is created**, and **highlights bottlenecks** and **waste**.
- Value stream management **ensures continual optimization**, aligning work with customer outcomes and business goals.
- **Core** and **enabling** value streams operate at **different levels** but **must integrate** to maximize value creation.
- **Mapping and management together** enable **shared understanding** and **continual improvement** of value creation.

Quiz

Questions:

1. Which term describes ‘what an organization does for its consumers and other stakeholders and why’?

   A. Value stream

   B. Value chain

   C. Operating model

   D. Organization’s purpose

2. Which of the following is **NOT** one of the steps in value stream mapping?

   A. Value stream identification

   B. Mapping of the ‘as-is’ value stream

   C. Mapping a ‘to-be’ value stream

   D. Value stream management

3. What is the **MAIN** purpose of value stream mapping in an organization?

   A. To automate service monitoring

   B. To identify and prioritize improvement opportunities

   C. To enhance and support management practices

   D. To control external stakeholders directly
